

Alessio Pinto

Junior Full Stack Developer | PHP · Laravel · JavaScript · WordPress

Genoa, Italy | +39 327 836 3979 | alessio.pinto02@gmail.com | alessiopinto.com | LinkedIn

Summary

Full Stack Developer with professional experience building and maintaining PHP/JavaScript web applications. Developed WordPress media-management tooling for sites containing 8,000+ images and previously ranked in the top 2% of testers on Applause, with additional experience leading test cycles and reviewing defect reports.

Experience

TWOW — Junior Full Stack Developer

Genoa, Italy

On-site Internship

Nov 2025 – Present

- Develop and maintain full-stack web applications using PHP, JavaScript and SQL, collaborating through Git-based workflows and contributing to custom WordPress implementations.
- Build and optimize Laravel middleware and REST API integrations supporting client-server data exchange and application functionality.
- Refactor codebases and resolve defects across 10+ high-traffic client platforms, reducing accessibility errors by 70% and boosting Lighthouse performance scores from 30 to 50.
- Successfully recovered a compromised client website following a critical WordPress vulnerability breach, executing malware removal, secure backup restoration, and system hardening.

Applause — QA Tester / Team Test Lead

Remote

Freelancer

Jul 2023 – Present

- Ranked among the top 2% of testers while executing functional and regression testing across web and mobile products.
- Identified, reproduced and documented software defects with detailed reproduction steps and supporting evidence used to validate production releases.
- Selected as Team Test Lead (Jun – Nov 2025), coordinating test cycles and reviewing tester submissions for completeness, accuracy and reproducibility.

Projects

TST Media Management — WordPress Plugin

PHP · JavaScript · SQL · AJAX · WP-CLI

- Engineered a WordPress media-management plugin for sites containing 8,000+ images, detecting and safely managing unused assets across ACF, WooCommerce, Gutenberg and Polylang content.
- Designed a four-stage batch-scanning architecture for shared-hosting environments, including recursive analysis of serialized data structures.
- Implemented a virtual-folder workflow, reversible trash system and WP-CLI ZIP export to support safer cleanup and recovery.
